

KENYA SCHOOL OF GOVERNMENT
DENIS KIPLAGAT
ICT DEPARTMENT
MENTERSHIP REPORT

Activity	Description	Achievement/Lesson Learned
Customer Support Skills	Engaged with clients to resolve inquiries and improve service.	Enhanced communication and problem-solving skills.
Project Management Skills	Assisted in planning and executing departmental projects.	Gained insights into effective project planning and execution.
System Module Generation	Participated creating modules for software systems.	Developed an understanding of modular design principles.
System Design and Development	Collaborated on designing and developing new systems.	Learned about the software development lifecycle and best practices.
Hardware Maintenance	Helped maintain and troubleshoot hardware issues.	Acquired practical skills in hardware diagnostics and repair.
Email Management	Managed and organized departmental emails for effective communication.	Improved organizational skills and response efficiency.
System Security	Involved in assessing and enhancing system security measures.	Understood key principles of cybersecurity and risk management.
Technical Problem Solving Skills	Addressed technical challenges and provided solutions.	Enhanced analytical thinking and technical troubleshooting abilities.
Web Designing and Development	Assisted in designing and developing web interfaces.	Gained hands-on experience in web technologies and design principles.
ERP Modularization	Supported the process of breaking down ERP systems into manageable modules.	Learned about ERP systems and the importance of modularity in software.
Agile Methodologies	Participated in agile meetings and sprints.	Learned about iterative development and team collaboration.
Database Management	Assisted in managing and querying databases.	Gained practical skills in SQL and database design.
API Development	Helped in designing and integrating APIs for software applications.	Understood the importance of APIs in system integration.
Code Review	Engaged in reviewing and providing feedback on code written by peers.	Developed critical thinking and code quality assessment skills.
User Experience (UX) Testing	Participated in testing software for user experience and functionality.	Learned how user feedback shapes design and development.
Version Control (Git)	Used Git for version control in software projects.	Became proficient in collaborative coding and tracking changes.
Software Documentation	Assisted in creating and maintaining documentation for software projects.	Understood the significance of documentation in software development.

MENTERSHIP REPORT

Mobile App Development	Contributed to the development of mobile applications.	Gained exposure to mobile technologies and user interface design.
Cloud Computing	Learned about cloud services and deployment processes.	Developed an understanding of cloud infrastructure and scalability.
Testing and Quality Assurance	Involved in testing software for bugs and performance issues.	Learned best practices in software testing and quality assurance processes.

Summary

Through these activities, I have developed a diverse skill set across various domains of technology and project management. Each experience has contributed significantly to my personal and professional growth, enhancing my ability to work effectively in collaborative environments and tackle complex technical challenges. This journey has laid a solid foundation for my future endeavours in the tech industry.
